
Specification

Parameter	Description
Operating Voltage Range	DC9V
Standby Current	10uA
Induced Current	less than 30mA
Relay Output	normally open/closed output
	Output high/low
Adjustable sensitivity	-
Operating Temperature	-5 to 50 °C

Smoke module wiring instructions

Black: Ground

Red: positive power supply DC9V

White: often the beginning of the relay

Blue: relay common

Green: relay normally closed terminal

Simple test method

1. Hold down the test button 3S, light starts flashing and relay start relay often connected with the public side.
2. Can also be smoking cigarettes, the smoke blown into the maze, 3S light starts blinking around and relay, the relay always start with the common connected
